**Web Filtering & Firewall**

Enterprise-level Security for Small Businesses
Protect your Infrastructure from Outside Attacks and Reclaim your Network

---

**Protect your Network from Unsafe Web Content**

Protect your employees and network by preventing questionable and unsafe content from entering your IT infrastructure. With Kornerstone Technology’s Content Filtering Solutions, you can have precise control over the sites to which your users can go. Group policies can keep certain employees from accessing sites like Facebook and YouTube, ensuring a more productive environment, and you can completely filter out sites that are distasteful for the work environment. The intelligent filtering system will automatically detect inappropriate content and block it, so you don’t need to manually enter in banned sites. Best of all, the system has a nearly nonexistent footprint, unlike software filters that bog down your client workstations. If you have an old workstation that isn’t being used, ask us about configuring it as your content filter to save you the cost of new hardware!

**Enterprise-Level Strength Firewall for a Fraction of the Cost**

Cost-effective solutions give you the protection you need without breaking the bank.

Add an extra layer of protection to your entire network infrastructure by adding a secure Firewall solution to your business. Block unauthorized access to your computers and network, protect data, and provide a strong first line of defense against viruses and malware. Hardware firewalls are a comprehensible security solution that requires no interaction for your end-users (unlike typical software firewalls that only offer basic protection and are often at the will of the user to decide when to allow or disallow software to run on the workstation). No sluggish workstations, no nagging access requests, and as always, peace of mind knowing your infrastructure is being protected and managed.

“Reclaim your network with Kornerstone Technology Web Filtering”

**Other Security Solutions**

- Antivirus
- Anti-malware
- Spam protection
- Virtual Private Networks (VPN)
- Backup and Disaster Recovery

---

**Features**

- Enterprise-strength Firewall Solution
- Completely Managed 24x7x365 with Support
- Prevent Intrusions, Malware, Worms, and Other Attacks
- Filter Inappropriate Content from your users
- Blacklist Time-Wasting Sites from Certain Users

**Benefits**

- Enable the first defense against malware and other attacks
- Hardware-based systems mean no processor-intensive workstation clients to run
- Block inappropriate sites automatically, restricting adult content to protect your company’s reputation
- Blacklist certain sites like Facebook and YouTube for some while still enabling your marketing team to utilize them
- Comply to HIPAA standards
- Reclaim your network and protect your infrastructure without bogging it down!
